June 1, 2009

Dear ICRI and Potential Students,

It is a privilege to be offering the ICRI students the Master of Science in Clinical Research (MSCR) degree program from our university. This collaboration with ICRI is a wonderful opportunity for both institutions and their students.

The MSCR program was approved by the South Carolina Commission on Higher Education as a unique degree in 2000. Since then we have trained nearly 100 students who have been successful both during and after our program.

The MSCR program trains students in

- building collaborative teams and communicating with multidisciplinary research teams (team scientist),
- building research programs with the pharmaceutical industry, and
- becoming future leaders and mentors in clinical research

This collaboration will allow students to earn our degree at ICRI campuses and provide a unique opportunity for small group of students to study here at the Medical University of South Carolina. We look forward to this opportunity to educate a new group of clinical researchers.

Sincerely,

Thomas C. Hulsey, MSPH, ScD
Director, Masters of Science in Clinical Research
